WCPO YELLOWFIN TUNA ASSESSMENT PEER REVIEW NOUMEA, 7-13 SEPT, 2022

Background

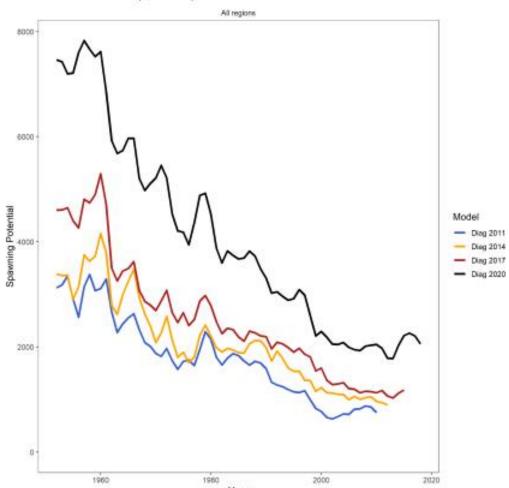

Blah blah blah

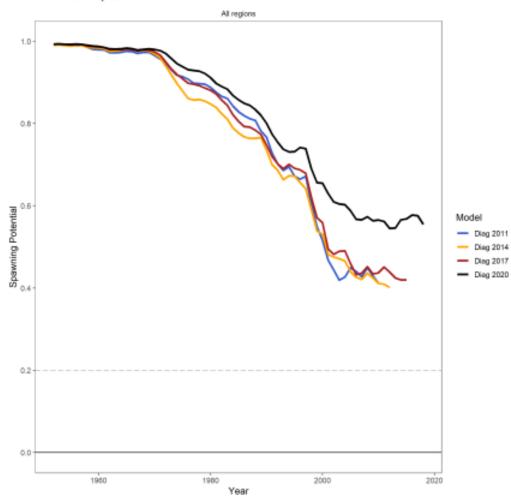

(a) Spawning Potential

Estimated biomass (1,000s mt) - Annual

(b) Depletion

Estimated depletion - Annual

DYNAMIC STOCK STATUS

Depletion (Stock status) = $SB_{recent}/SB_{F=0}$

SB_{recent} averaged over last 4 years (e.g. 2014-2018) Spawning biomass

SB_{F=0} averaged over recent 10 years (e.g. 2008-2017) Unfished biomass (dynamic)

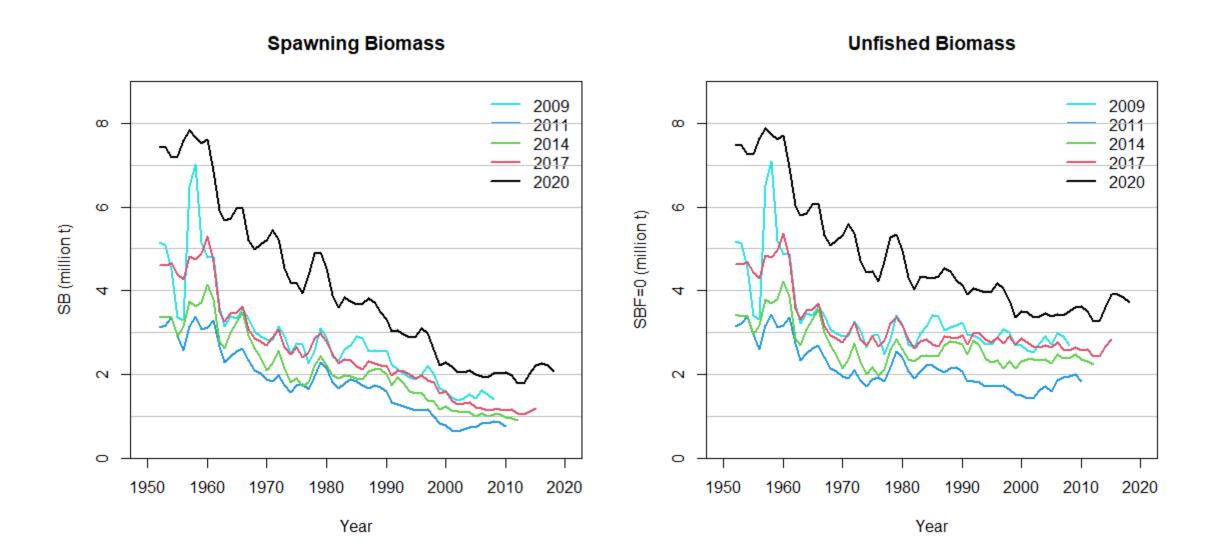

Averaged depletion: applied to the median of the uncertainty grid for management

Instantaneous (dynamic) depletion: traditionally plotted for the diagnostic cases

Why? Historical precedent

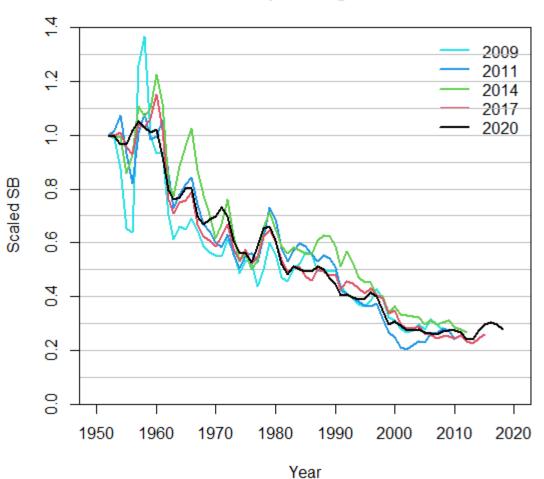

EXPLOITED VS UNEXPLOITED

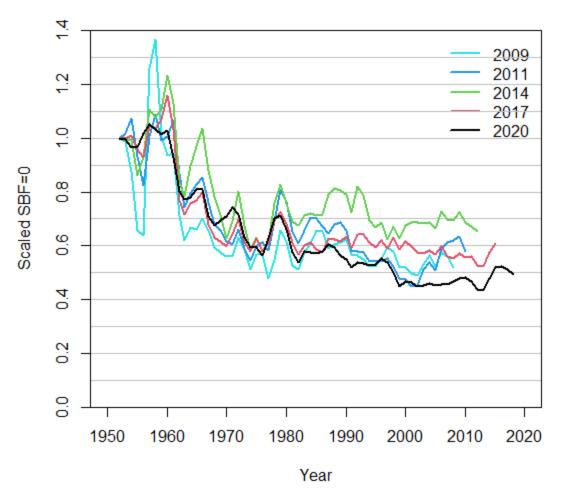

EXPLOITED VS UNEXPLOITED (NORMALISED TO 1952)

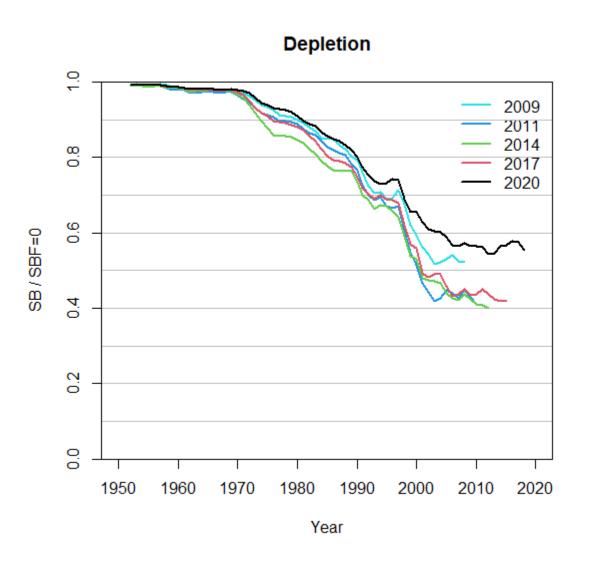

Relative Spawning Biomass

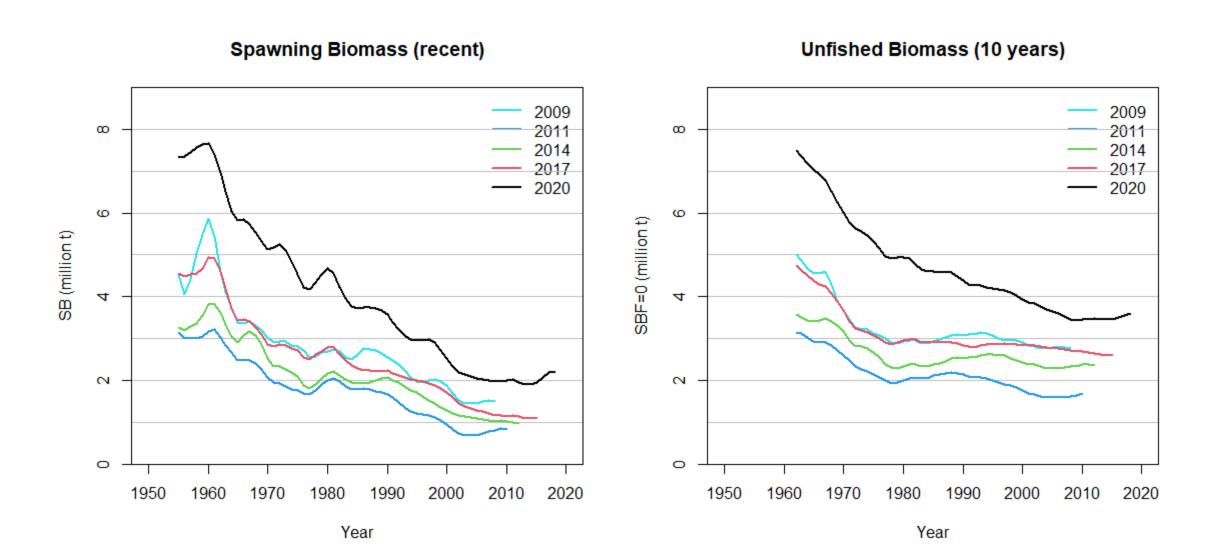

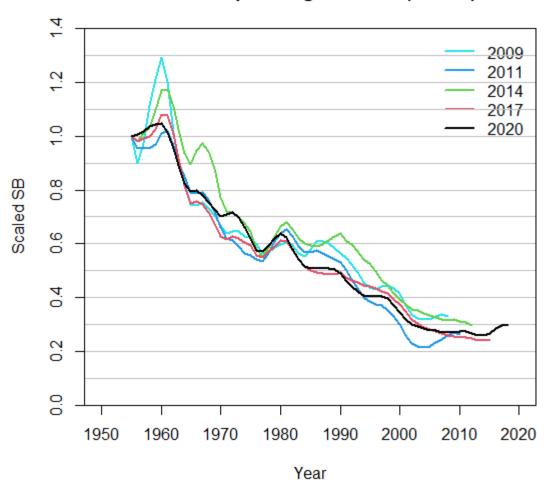

EXPLOITED VS UNEXPLOITED (AVERAGED)

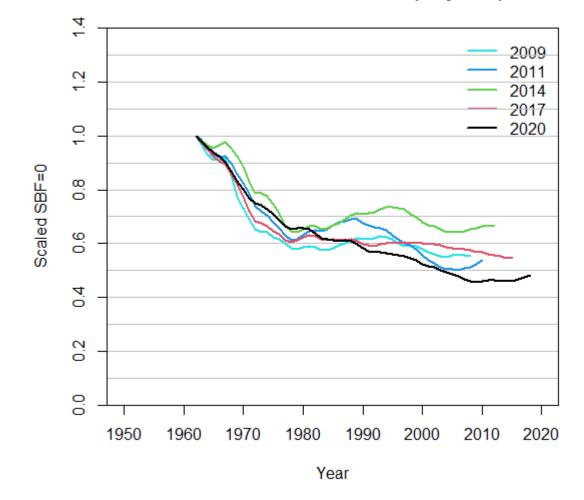

EXPLOITED VS UNEXPLOITED (AVERAGED AND NORMALISED)

Relative Spawning Biomass (recent)

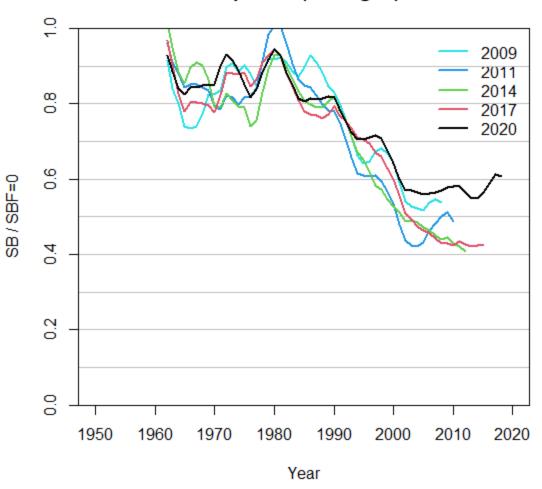

Relative Unfished Biomass (10 years)

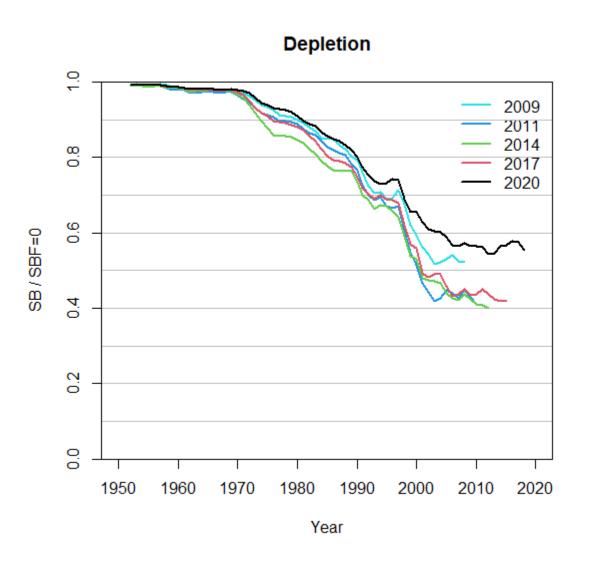

Depletion (averaged)

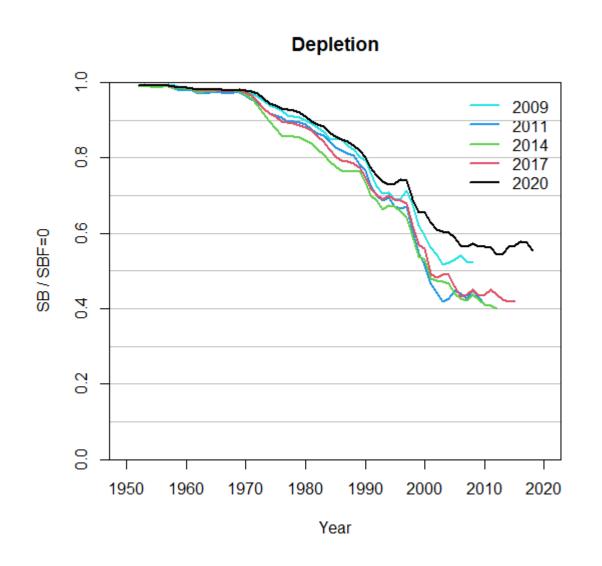

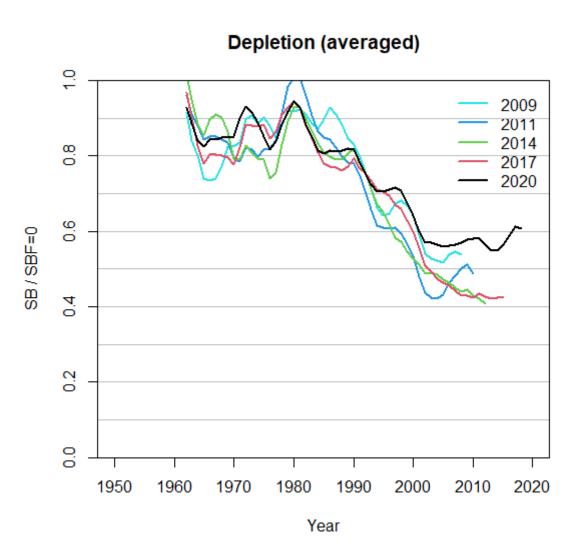

STOCK STATUS (ASSESSMENTS 2009-2020, INSTANTANEOUS)

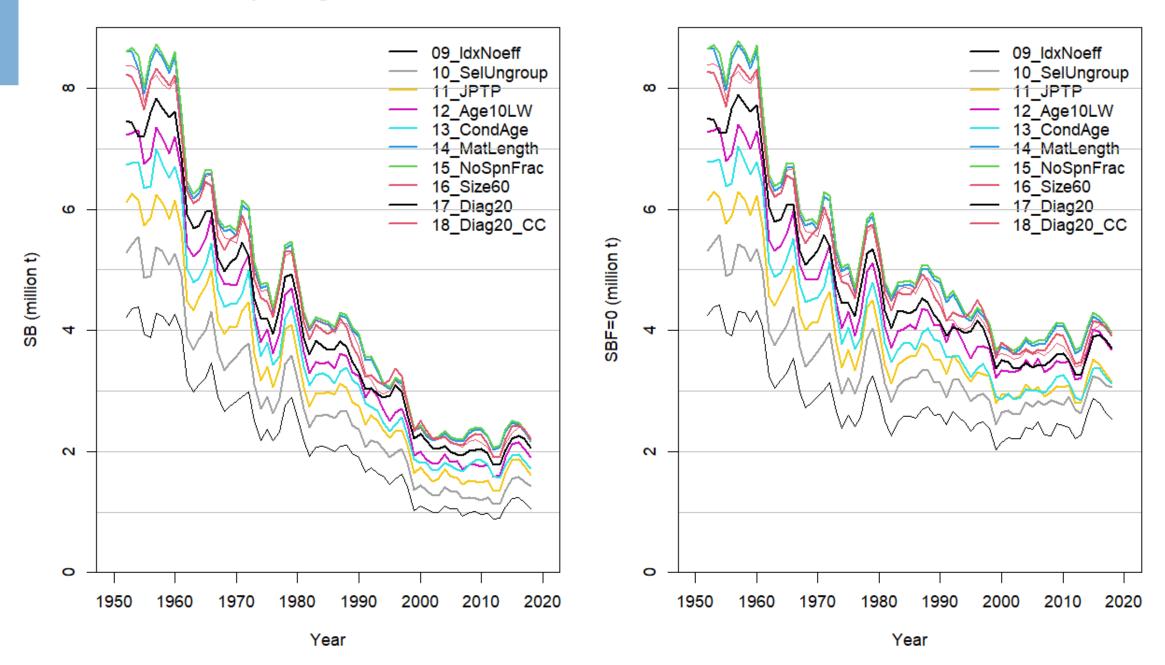

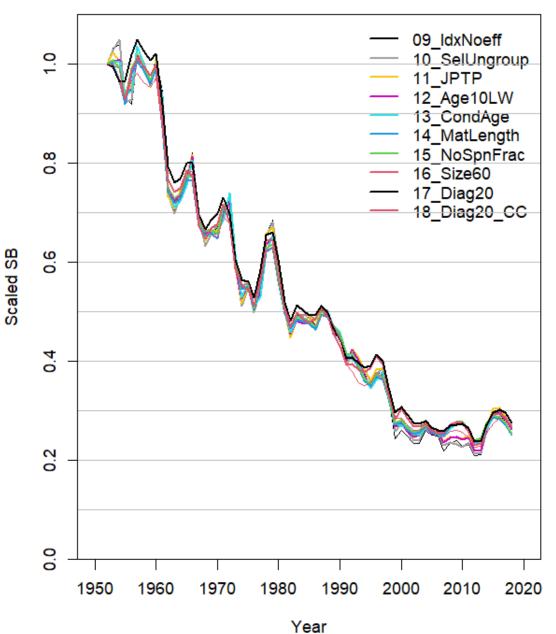

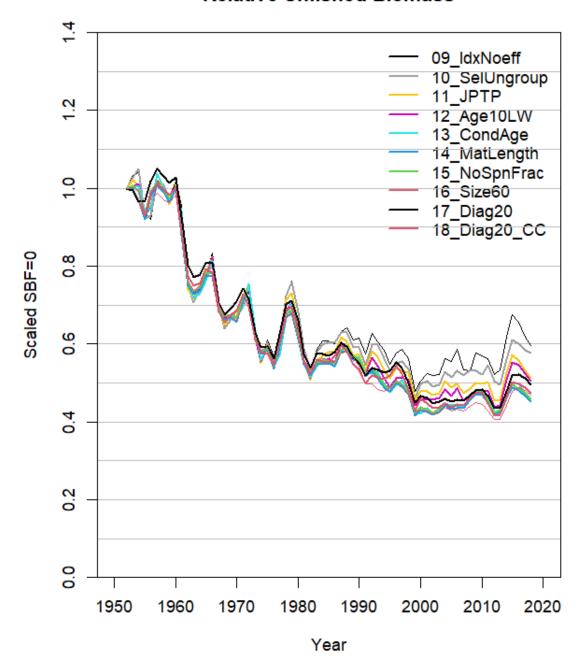

Spawning Biomass

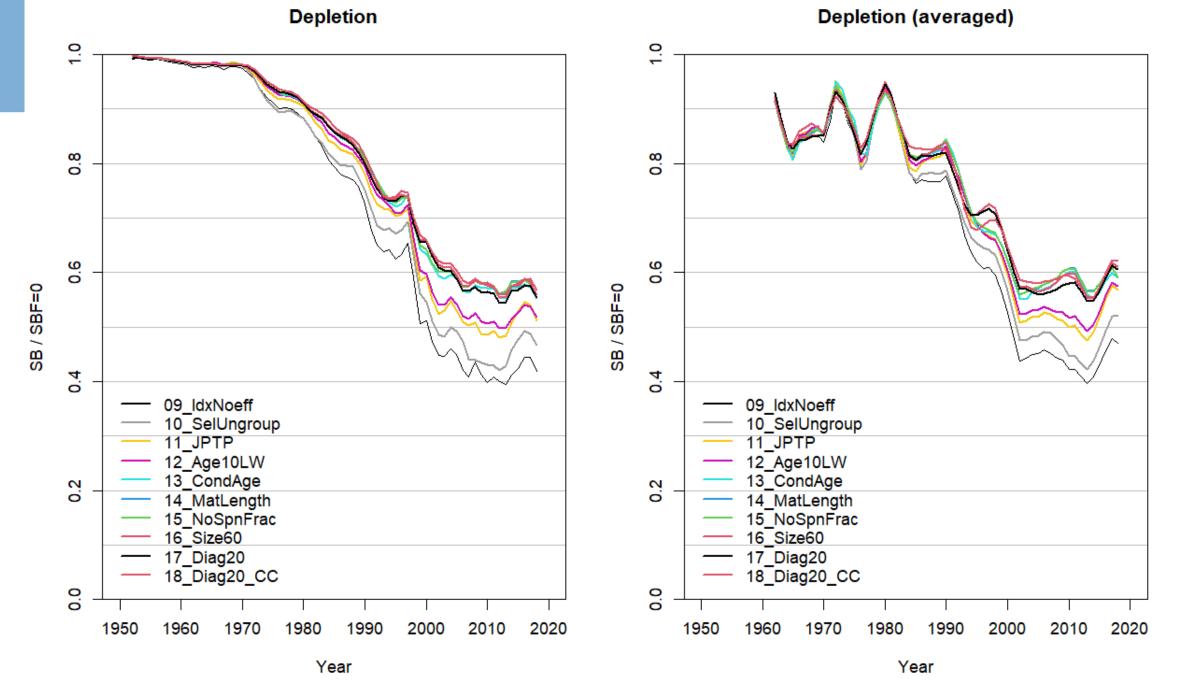

Unfished Biomass

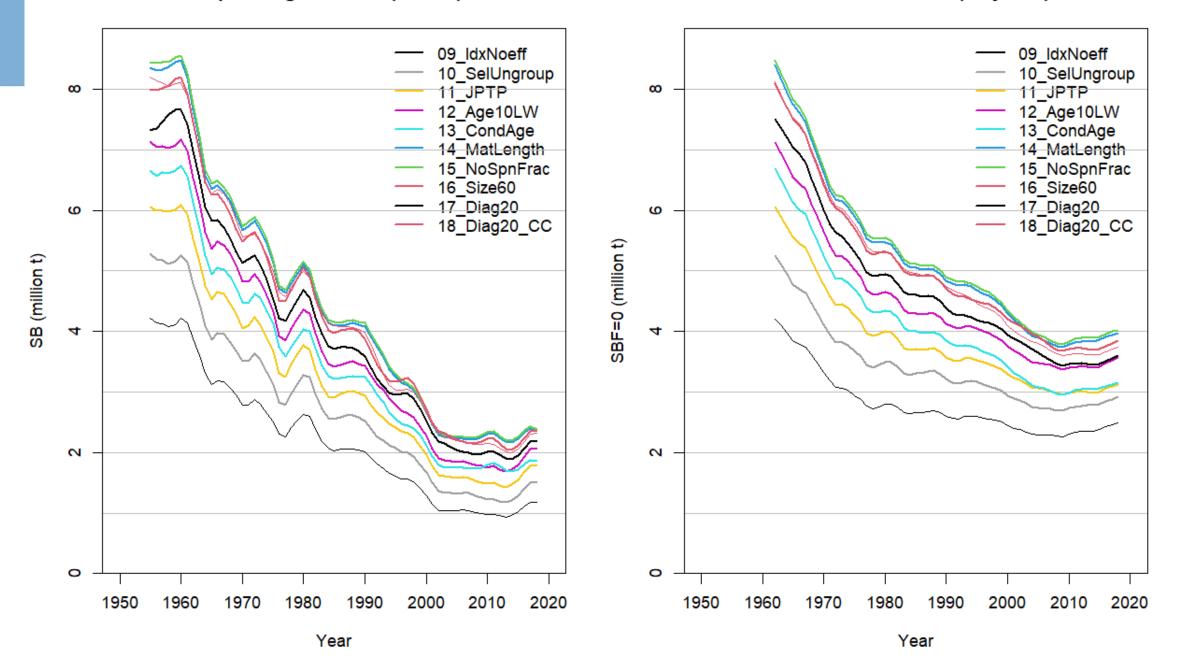

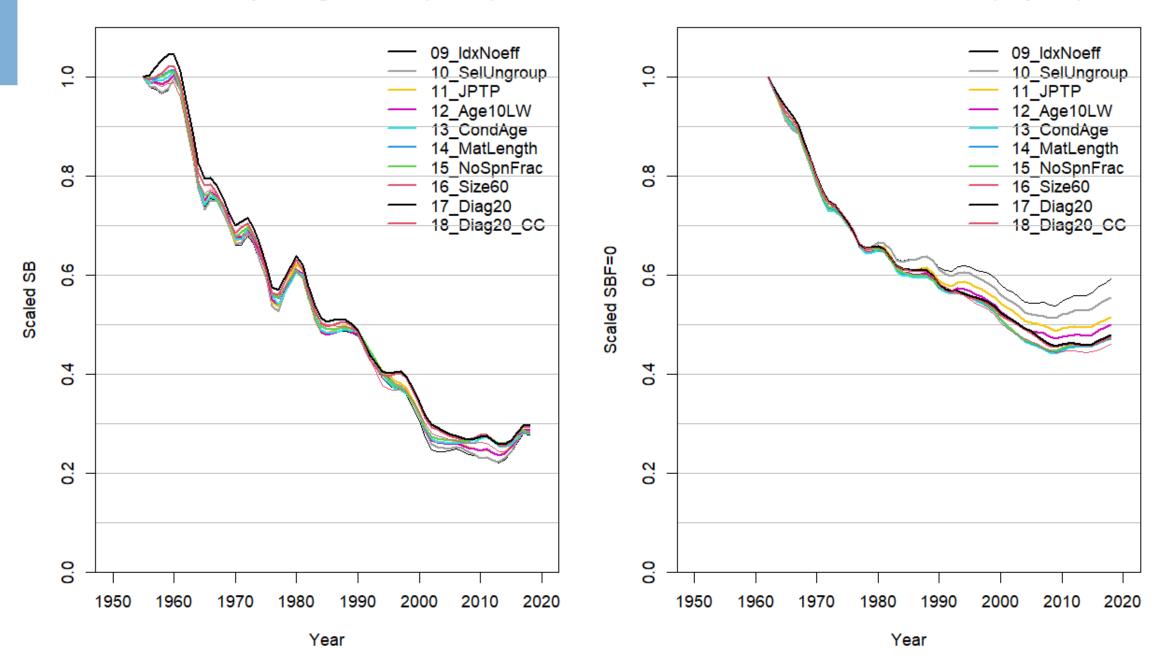

Spawning Biomass (recent)

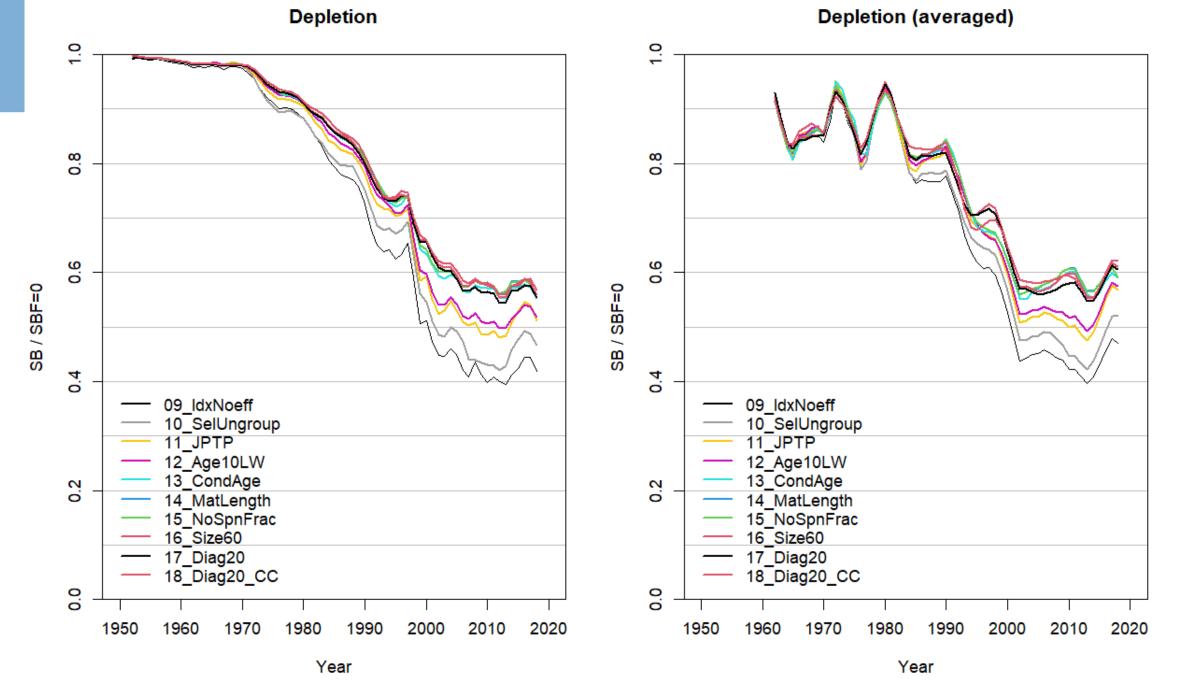

Unfished Biomass (10 years)

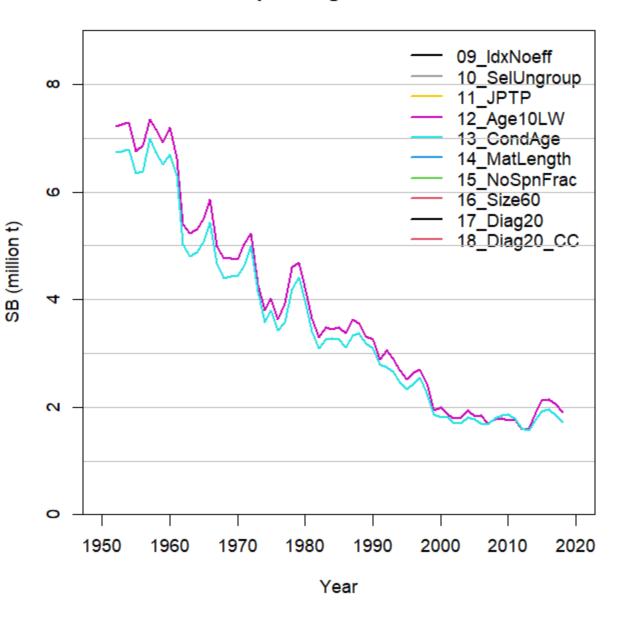

Relative Spawning Biomass (recent)

Relative Unfished Biomass (10 years)
